

Vocabularies

Express Talk

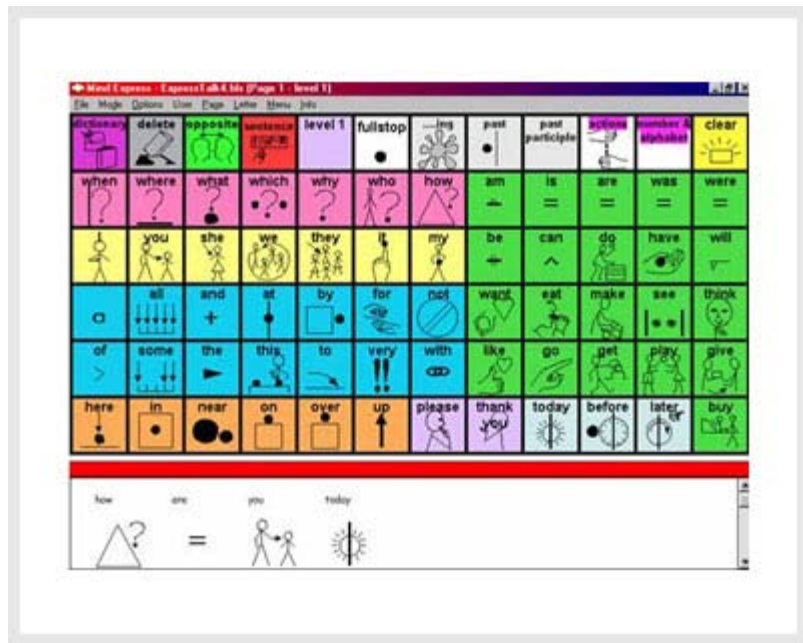

ExpressTalk is a series of vocabulary packages for MindExpress software which can run on any PC computer under the full Windows Environment (not Windows CE). There are three vocabularies in the series: ExpressTalk-Starter, ExpressTalk-Intermediate and ExpressTalk-Senior. Each vocabulary is self contained and it is not necessary to progress through the series although this is a likely scenario for someone new to communicating with symbols. Colour coding is used in each of these vocabularies to assist navigation and perceptual scanning but not for grammar classification. All of the vocabularies will need some personalisation for each individual user.
