

JAYNE BUSH A SWITCH & KEYBOARD USER OF THE ALLORA:

“ I can see the letters very clear and nice and big I have tried other communication aids but I have found the ALLORA the best one for me. ”

The Allora is a keyboard and switch accessible, text to speech, communication device. It is designed to meet the needs of people who have reduced or little ability to speak and whose motor skills require a device that can adapt to their physical changing needs over time.

The Allora is particularly useful for those suffering from Motor Neurone Disease, Cerebral Palsy, Stroke, Autism or Acquired Brain Injuries.

The second display can either sit on the back of the device as shown below or it can be detached as above.

BATTERY

- User replaceable Lithium Ion battery pack
- Battery capacity - at least a whole day's usage from one charging cycle using power saving when not in use.
- 2 days standby time

We recommend that the device is charged every night.

Always use the charger that is supplied with the unit otherwise your warranty will be invalidated.

SOUND

- Dual Speakers on device
- Speaker on 2nd Display
